

Turn your computer into an (F.A.T.) automatic timing system

Eagle Eye software brings automatic timing into the digital age. Now in an easy to use Windows environment, fully automatic timing is a reality for every budget

Whether you're upgrading from your old VCR system or building your new timing system from scratch, our packages have exactly what you need.

Eagle Eye meets and exceeds NCAA and high school requirements for legal automatic timing(F.A.T.).

System Overview

Eagle Eye software combined with the hardware below create a complete automatic timing system. Videotapes are a thing of the past -- it's completely digital with the speed and efficiency of modern technology.

How it Works The Pyro-Bright Flash when aimed at the Starter, triggers an on screen race clock with the flash of the Starting gun. With the video camera aligned on the finish line and wired to a specialized digital converter connected to your computer through FireWire, race video is sent directly to the computers hard drive in real time....no video tape involved! Eagle Eye software makes determining the place of finish and automatic time for each athlete fast and efficient. Easy record and playback controls allow users to learn the system within minutes. Results are written down, typed into a spread sheet or imported directly into Hy-Tek Meet Manager. It's even possible to create photo results - great for small JV type meets when no heat sheets are created in advance and for proof of performance needs.

Fast or Faster

Use either a one or two computer configuration. Easily keep pace with most track meets with one computer – even run both Eagle Eye and Hy-Tek on the same computer – or for large invitationals (where speed in the press box is critical) run Eagle Eye on two networked computers and give the Starter the ability to immediately start the next race... Making Eagle Eye faster than all the competition!

Required Equipment: 1. Eagle Eye Timing Software, 2. Computer (PC with a minimum of 512RAM and 40G of free hard drive space and a built in 6-pin firewire port (desktop) or a 6-pin firewire card add on for laptops), *Note: 4-pin firewire is not reliable for timing.* 3. Video Camera (digital or standard VHS analog video camera with RCA or A/V output. If digital: Hi8, Digital 8 or MiniDV) *Note: Hard Drive, MiniDVD and High Definition video cameras are not recommended.* 4. Pyro-Bright Flash Timer, 5. .32 Caliber Starters Pistol and Pyro Bright Flash starting shells 6. Digital converter, 7. Video cable (connecting camera to the converter), 8. Specialized File transfer cable (required only if using two computers)

Easy to Use

Eagle Eye is designed for coaches, parents, students and volunteers - not computer people.

“With this new software, I can train parent-volunteers (who have no timing experience) how to read races in less than 5 minutes. It’s that easy.”

Accurate

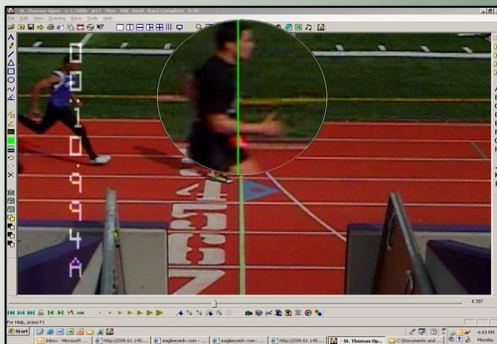

Eagle Eye software meets and exceeds collegiate and high school requirements for fully automatic timing (F.A.T.).

Affordable

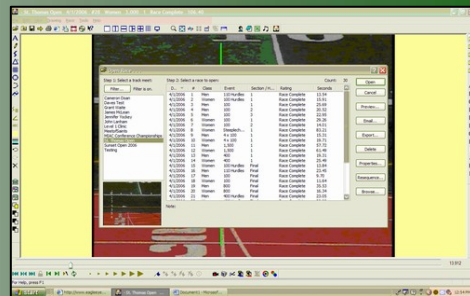

With today's technology, automatic timing is now affordable for all track programs. With Eagle Eye, there's no need to break the budget with line-scan systems costing thousands of dollars or hire expensive outside timing crews or hand timers.

Compatible

Customized for efficiency and ease of use, Eagle Eye Timing software is completely compatible with Hy-Tek Meet Manager – and our unique networking cable easily allows both the Eagle Eye and Hy-Tek computers to work seamlessly together.

Timing Packages & Accessories

Bronze Package

Take your Pyro Digital!

Perfect for those already using the Pyro-Bright Flash timer and want to upgrade their outdated VCR system. Includes timing software and digital converter. Computer, video camera and video cables not included.

Item Price
EP1 \$1,019.00

Silver Package

You provide the camera and computer, the Silver Package takes care of the rest. Includes the Bronze Package plus the Pyro-Bright Flash, 200ft of video cable & protective camera enclosure.

Item Price
EP2 \$1,938.00

Gold Package

Includes the Silver Package plus the Hy-Tek software bundle for increased results efficiency. Bundle includes Hy-Tek Meet Manager, Seeding option & PhotoFinish Interface. Computer and camera not included.

Item Price
EP3 \$2,527.00

Platinum Package

Everything you need for the most affordable automatic timing system available. Includes the Gold Package plus a laptop computer and MiniDV digital video camera.

Item Price
EP4 \$4,027.99

Pyro-Bright Flash

The Pyro Bright Flash timer seamlessly integrates with the Eagle Eye software, video camera and digital converter, to produce the simplest, most reliable and affordable fully automatic timing (F.A.T.) system available today.

Item Price
EEPBF \$650.00
Item
EE014 \$ 23.00

Video Cable

The #1 Selling 75 OHM Video Coaxial cable. A lightweight flexible cable perfect for connecting your finish line video camera to the converter in the press box. PVC outer neoprene shell stays flexible and kink resistant!

Item Price
EE008 \$85.00 / 100ft

Camera Enclosure

Keep your video camera safe and dry with Eagle Eye's protective camera enclosure. Top and sides are sealed so water cannot enter. Base plate and cover separate for quick assembly and access to align video camera.

Item Price
EE011 \$99.99

File Transfer Cable

Network two computers with this plug-n-play, drag-n-drop USB device. No need to set up complicated network connections. Once connected to each PC both hard drives automatically appear on both screens, allowing bi-directional transfer of Eagle Eye and Hy-Tek files.

Item Price
EE015 \$69.99

Digital Converter

Digitally converts video signal for input to the computer.

Item Price
ADVC \$320.00

Hy-Tek Bundle

Necessary software to integrate Eagle Eye and Hy-Tek results. (Meet Manager, Seeding, PhotoFinish Interface)

Item Price
EEHTB \$589.00

Eagle Eye digital video Motion Analysis Software

Save hundreds!

Coaches agree, video analysis plays a vital role in the success of today's athlete's. Eagle Eye software is a fully loaded motion analysis tool that makes technical analysis easier and more affordable than ever.

Software Features

- Complete Editing Tools
- Easy Windows Environment
- Video Chalkboard
- Instantly Determine Angles
- On Screen Lesson Creator
- Super Slow Motion at 60fps
- Side by Side Comparison
- Compare Multiple Video
- Personalized Notes
- Create Media and Documents
- Toggle Overlays
- Sequenced Pictures
- Measure Distance Traveled
- Plot Implement Flight Path
- Plot Angular Motion
- Bookmark Key Positions
- Magnify any portion of the screen
- Internal Video Timer
- Custom Grid
- Trim Video
- Share with your Team for FREE! With one purchase your entire team can have a read only version for their own computer

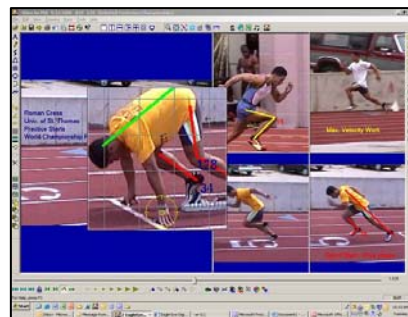

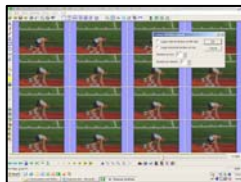

Easily download video from a digital camera or record live directly to your PC. Compare multiple athlete's or efforts in super slow motion or frame by frame. Instantly determine angles, time and measure important segments

and create documents for print or web with a click of a button. Eagle Eye's Video Lesson Creator can record all on screen editing and voice over's that can be emailed, posted or burned to a CD for your athletes to review on their own

Version	Item	Price
Single Camera	EE001	\$299.00
Multiple Camera	EE002	\$499.00

[The Multiple Camera version allows you to capture video from two or more cameras simultaneously. Computer must have multiple firewire inputs (not on the same card) for this version]

Necessary Equipment:
 Computer with a minimum of 512RAM, 20+G of free hard drive space, 4-pin or 6-pin firewire port or card, digital camera with firewire cable.
