

## Eagle Eye & Hy-Tek Integration

Eagle Eye

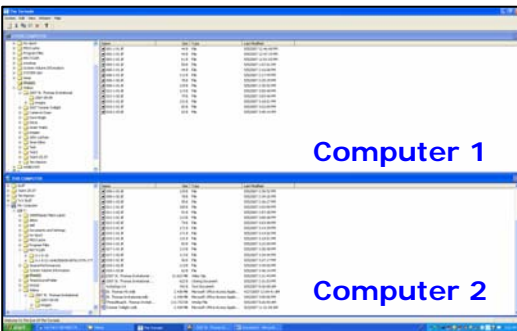

### File Sharing with TheTornado

#### 1. Connect TheTornado

Once connected to the USB ports of both computers, The Tornado automatically displays the contents of each computers hard drive in a split screen format. The bi-directional ability of TheTornado enables both computer operators to quickly drag-n-drop files from either computer.

### Transferring Results Files (.lif files)

#### 2. Drag-n-drop the RESULTS file

Within TheTornado display window, locate the **RESULTS** file inside the **C:tfmeets** folder on the computer 1 and **drag-n-drop** the most recent race file into the **tfmeets** folder on computer 2.

**C:tfmeets**  
Results File

*Drag-n-Drop*

**C:tfmeets**

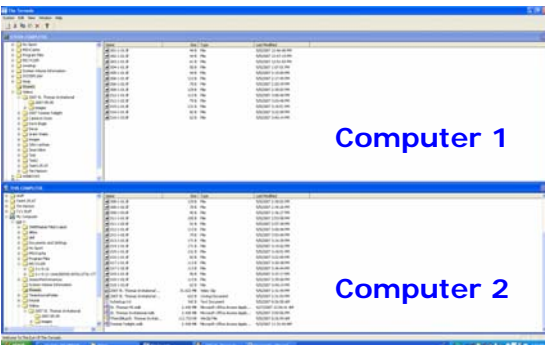

**Tip:** If the newly 'dropped' results file does not appear immediately in the C:tfmeets folder, rest your mouse over the folder and perform a **RIGHT-CLICK-REFRESH**.

### Transferring Race Video Files (.wmv)

This additional step is necessary only when Eagle Eye software is used simultaneously on both networked computers... TIMING on computer 1 and READING on computer 2.

#### 1. Create two track meets with the same name

In advance....create a track meet within **BOTH** Eagle Eye software programs (computers one and two) with the **SAME NAME**. This makes the newly 'dropped' video files accessible in the Eagle Eye Directory on the second computer.

**C:video**  
Video File

*Drag-n-Drop*

**C:tfmeets**

**Tip:** If the newly 'dropped' video file does not appear immediately in the C:videos folder, rest your mouse over the folder and perform a **RIGHT-CLICK-REFRESH**.

3. **Open the Video** in the Eagle Eye Directory on computer 2 and begin READING the race.
